Experience

College Complaint Report System

Project

Node.js, Express.js, MongoDB, HTML, CSS, JavaScript

- Built a full-stack complaint management system with secure authentication and a role-based admin dashboard, streamlining complaint tracking for institutional users.
- Designed and implemented RESTful APIs following MVC architecture, enabling clean separation of business logic and data access layers.
- Optimized MongoDB database interactions for scalable performance, ensuring efficient CRUD operations under growing data volumes.

Appspector – Python Application Monitoring System

Project

Python, System Monitoring, Modular Programming

- Developed a Python-based system monitoring application to track and display real-time running processes, improving visibility into application-level performance.
- Automated generation of system health and performance reports using Python, reducing manual effort required for routine diagnostics.
- Applied modular programming principles to structure the codebase for maintainability, scalability, and ease of future feature additions.
